▼ Anomalias de Código (Code Smells)

Anomalia	God Class
Descrição	Classe que executa muito trabalho por conta própria, delegando apenas pequenos detalhes a um conjunto de classes triviais e usando os dados de outras classes. Em resumo, é uma classe que faz ou que conhece muito do sistema.
Aglomerado?	Sim
Elemento	ClasseB
Razão	-

Description of each
agglomerated smell

Anomalia	Feature Envy
Descrição	Um método que está interessado em outra classe diferente da classe a qual ele pertence.
Aglomerado?	Sim
Elemento	ClasseA.next
Razão	-

Anomalia	Shotgun Surgery
Descrição	Alterações em um método que dispara várias alterações no sistema.
Aglomerado?	Sim
Elemento	ClasseC.egent
Razão	-

Anomalia	Refused Bequest
Descrição	Uma classe que ignora a maioria das funcionalidades da super classe.
Aglomerado?	Não
Elemento	ClasseA
Razão	-

Description of no
agglomerated smell

Concerns Tab

▼ Concerns

Princípio	Descrição
Concern Principal	<p>O principal concern (funcionalidade) implementado na aglomeração.</p> <p>Razão: Classes que implementam o concern principal: -ClasseA -ClasseB</p>
Concern Secundário	<p>Concern secundário que também é implementado na classe.</p> <p>Razão: Concern Secundário 1: [ClasseC] Concern Secundário 2: [ClasseB, ClasseA]</p>

About the Experiment with Graph-based

Main objective

Reason about pre-selected
code smell agglomerations

Identify (or not) design problems
with the agglomerations

In case you identify a design problem...

Briefly **describe** it

List the **visualization elements** that helped identifying it

List the **code elements** involved in the design problem

Final considerations

You will have **90 minutes** to finish the experiment

Questions? Please ask the experiment instructor
